- Graduation Thesis Topic: The Relationship between Ventilatory Threshold and Heart Rate Variability in Ramp Load Exercise Testing ([Link](#))

The thesis investigates the relationship between ventilatory threshold (VT) and heart rate variability (HRV) during ramp load exercise tests. It examines how the HRV metric DFA- $\alpha 1$ correlates with VT, exploring its potential use in non-invasive and real-time monitoring of physiological responses to exercise. The research involved analyzing data from incremental exercise tests on a cycle ergometer, focusing on the predictive value of HRV for determining VT, which could lead to more effective exercise prescriptions.
